MoCapture — Enterprise Pack

MoCapture v1.6.0 · 2026-10-03 · English summary

MUGWANGSOFT

No network · No ads · No notifications

MoCapture is a screen capture tool for Windows 10 (2004) and 11. It has no ads, no notifications, and **no network code at all**. This pack holds what a company usually asks for before rolling it out. The detailed documents are in Korean; this page gives the facts English readers need.

What is in this pack

File	For	What it says
`무통신-보증서.pdf`	Security review	No-network assurance: file hashes, source and binary checks, and a runtime log (1 page)
`보안질의서-표준답변.pdf`	Security review	Answers to 30 common security questionnaire items
`IT-설치배포-가이드.pdf`	IT	Silent install, Group Policy, settings policy file, hotkey conflicts
`제품소개서.pdf`	Decision makers	Product overview, rollout plan, pricing (2 pages)
`견적서-템플릿.xlsx`	Purchasing	Quote template; enter the seat count
`EULA-기업라이선스-계약서-초안.pdf`	Legal	License agreement **draft, not yet reviewed by a lawyer**
`evidence\network-check.log`	Security review	Raw log behind the assurance: TCP/UDP endpoints and network DLLs while every feature is used

Key facts

- **No network.** The source has no networking API, the built assembly references none, and the runtime check sees zero TCP/UDP endpoints and zero network DLLs loaded. No update checks, no telemetry, no crash reports.
- **No admin rights.** Installs into the user profile: `%LOCALAPPDATA%\Programs\MoCapture\MoCapture.exe`. No services, no drivers, no `HKLM` writes. The only registry writes are the user's own "Start with Windows" entry and a Snipping Tool switch the user presses themselves.
- **Text recognition stays on the PC.** Text copy and sensitive-info detection use the OCR engine built into Windows (`Windows.Media.Ocr`). No external engine, no model files, no cloud.
- **Two languages.** English or Korean, following the Windows display language. Set it with `"language": "en"` or `"ko"` in `settings.json`, or at the top of the Settings window.
- **Sensitive info, English set:** US Social Security numbers, card numbers (Luhn-checked), phone numbers (North American and international), email addresses, IBANs (mod-97 checked). Add your own patterns in `%APPDATA%\MoCapture\patterns.json`. Detection is an aid; a person still checks before sharing.

Install

The setup zip holds the same installer with English and Korean front ends.

```
install.bat          rem interactive
install.bat /S       rem silent: no output, exit code 0 or 1, the app is not started
uninstall.bat /S     rem silent removal; settings are kept
```

`설치.bat` and `제거.bat` are the Korean versions of the same two commands. Before deploying, compare the SHA-256 of the zip with the value MUGWANGSOFT published, or with the assurance document:

```
Get-FileHash .\MoCapture-Setup-1.5.0.zip -Algorithm SHA256
```

Files the program uses

Path	What
`%APPDATA%\MoCapture\settings.json`	Settings. Deploy it read-only to pin a policy
`%APPDATA%\MoCapture\patterns.json`	Company patterns for sensitive-info detection
`%LOCALAPPDATA%\MoCapture\history\`	Local capture history (off in no-trace mode)
`Documents\MoCapture`	Default save folder

Put an empty `portable.txt` next to the exe and all of the above live next to the exe instead.

Known limits

- **Not code-signed yet.** Windows SmartScreen asks once on first run ("More info" > "Run anyway"). Every release ships with SHA-256 hashes and a VirusTotal result.
- **No license key check yet.** Seats are counted by the customer and reported once a year.
- **No hard settings lock.** A read-only `settings.json` brings the policy back on the next start.
